

AWP on Discovery Sun

- sets new standards!

Discovery Cruise Line is known as America's favourite "one day cruise" for very good reasons. Discovery Cruise Line offers all the amenities and activities of a traditional cruise - in "one fun-filled day". Enjoy the outdoors on one of the spacious cruise sun decks, take a dip in the pool, participate in the popular limbo contest, or simply move to the rhythms as you cruise to the Bahamas from Port Everglades, Fort Lauderdale. Discovery Cruise Line has been voted "Best day cruise" to the Bahamas six consecutive years by the readers of Porthole Cruise Magazine.

Following the company's environmental cautious policy, Scanship Environmental is asked to upgrade the 9,903 tons, 1.200 passengers cruise ship / RORO Cargo Ferry - Discovery Sun. By implementing Scanship's Advanced Wastewater Purification (AWP) system, the ship will offer

its services to cruise passengers for years ahead. Scanship AWP systems meets all prevailing rules and requirements for Advanced Wastewater Purification systems - plus the new IMO requirements.

Based on the general AWP awareness and numerous specific requests, Scanship foresees a significant number of small to medium scaled AWP systems to be installed on small to medium sized cruise vessels and ferries over the next few years to come.
